

SUPPLIERS TO ROBERT WALTERS – AN ENVIRONMENTAL CODE OF PRACTICE

We recognise, as a company, that we have a responsibility to protect the environment on behalf of our shareholders, customers, staff and the communities in which we operate.

We also recognise that the process of continual environmental improvement depends on the involvement and commitment of all our business partners.

Our Environmental Policy reflects Robert Walters' commitment to responsible management of the environmental effects arising from its activities, through:

- optimising the use of energy
- ensuring efficient use of materials
- encouraging re-use and recycling
- incorporating the principle of sustainable development.

We expect our suppliers, therefore, to be an active part of this policy by adhering to the following code of practice:

- Our suppliers should have a policy statement covering relevant environmental and sustainability issues. Responsibility for implementation of the policy should be held by a nominated company representative, ideally at director level backed by sufficient support of management to ensure operational implementation.
- Suppliers should be aware of the environmental impacts of the products and services they provide. Objectives and targets should be set to reduce any significant environmental impacts.
- Suppliers should have a robust system that ensures they are aware of and comply with all relevant legislation so that all products or services supplied to Robert Walters at least meet or exceed these requirements.
- Products and services supplied to Robert Walters should take account of the principles of sustainable development in their design, production, use and end-of-life disposal. Specifically, they should:
 - use the optimum amount of raw material
 - safeguard biodiversity
 - use energy efficiently
 - minimise the impacts of use and disposal
